SPECIAL QUOTATIONS. Prices, particularly of Field Seeds, depend upon market conditions and are subject to change without notice. We will quote large quantities at prices as low as the highest quality of seed will permit. Let us quote you current prices on Grass and Field Seeds, Seed Potatoes and Onion Sets.

SEED TREATMENT. The treatment of seeds before planting is good insurance against loss and poor stands due to unfavorable weather and soil conditions. The so called failure of seeds to germinate is more often due to outside influences than any fault in the seeds themselves. The most effective materials we have found for seed treatment for good general use are Spergon and Phygon. These are particularly effective on Beans, Beet, Corn, Spinach and Squash and beneficial to a lesser degree on many other seeds. It is important that the right amount of the right material be used or germination may be retarded.

We recommend that our customers use these materials only with the most recent instructions of manufacturers and Experiment Station authorities. Upon request we can furnish seed on bulk orders treated as required at a slight advance in price, but we do not guarantee or hold ourselves responsible for results.

MAIL ORDERS. In the shipping season we endeavor to give prompt service on orders, and give special attention to seeds needed for immediate planting. During the rush season some delay is inevitable as we are called upon to supply an ever increasing number of orders in spite of being hampered by uncertain and slow delivery of our seed supplies. Early orders are advisable, particularly for seed to be sown in greenhouses and cold frames for growing early plants. Very early orders for general garden planting may have to be held for economical handling until crops of seed are received and packaged.

CONNECTICUT SALES AND USE TAX. Residents of Connecticut are liable for and we must collect a tax of 2% upon a few items, such as Plant Labels, Twines, Paper Pots and feed for pets, such as Dog Feed and Bird Feeds.

BEFORE MAILING YOUR ORDER. Write your name, address and shipping point in full and plainly on the order sheet. Be sure to give nearest freight or express station if different from your post office address.

We will gladly send copies of this catalogue to any of your friends who may be interested.

SEED GROWERS AND DEALERS
FOR 130 YEARS — ESTABLISHED 1820

We are proud to have completed 130 years of service to those who garden for pleasure and those who garden for profit. During that time we have noted vast changes in methods of gardening, and equally great advances in methods of seed growing. We have been very close to these as, so far as possible, we have kept abreast of the changes.

Farming and gardening have become really scientific operations, while the novice has greatly increased opportunities to grow to perfection interesting varieties of vegetables and flowers. To continue to offer not only the finest varieties, but the finest strains of those varieties the growing and handling of seed requires continually more ability and knowledge.

By combining the skill of specialists throughout the United States and in many foreign countries with our experience in growing seed on our own farms we feel that we can offer more than just good seed. With every purchase you receive the benefit of careful planning and long experience.

Velvety lawns for modern buildings grow from our carefully planned mixtures

LAWN GRASS MIXTURES

Fine lawns can be grown only from clean, high germinating seed. Our Mixtures are carefully planned for permanent velvety lawns with average soil and care. Each mixture is adapted to a particular type of use or soil condition, and composed of highly re-cleaned seed, containing a negligible amount of weed seeds and waste. The percentage of basic permanent grasses is so high that for each 400 sq. ft. only one pound of seed is needed. Conn. seal mixtures are approved by the Connecticut Department of Farms and Markets for composition, purity and germination and are your guarantee of quality. Separate varieties of grasses are listed on page 43. We will be glad to advise you as to special mixtures for unusual conditions. You may order 8 to 24 lbs. at the 15 lb. rate, prepaid; 25 lbs. or more at the 100 lb. rate, not prepaid.

SWEET CORN

Standard Varieties

Sweet Corn is tender and will not stand frost, nor will it germinate well in wet cold soils. It responds to good soil and clean, frequent shallow cultivation. Plant in well fertilized hills 3 feet apart each way, putting 5 or 6 kernels in each hill and covering to a depth of not more than 1½ inches. When 6 inches high remove all but the 3 most vigorous stalks from each hill. For a succession throughout the season plant several varieties early in May, including first early to late varieties. A good main crop variety planted at intervals of two weeks until the middle of July will produce a continuous supply. Treatment with Spergon is very effective in insuring the germination, especially for early plantings, and controls seed borne diseases. For prices of Spergon see page 44.

PEAS

Peas should be sown as early as possible in order to mature before the hot summer weather. To secure an extra early crop the smooth seeded varieties may be sown just as soon as the ground can be worked. The wrinkled varieties are not quite as hardy and should be planted a little later. Sow 2 or 3 inches deep in single or double rows 3 to 4 feet apart. The tall growing sorts require brush or other support. This is not so necessary for the dwarf varieties but they are greatly benefited if kept off the ground. Inoculation of the seed before planting with Nodogen increases the crop and enriches the soil.

SPINACH

The most important greens crop. It is very hardy and will stand considerable freezing weather, but many varieties run to seed rapidly in hot weather. May be sown in spring as early as the ground can be worked, either in rows or broadcast. Summer sowings should be on freshly plowed ground and the soil must be packed hard about the seed, as it will not germinate in dry soil.

Spinach seed treated with PHYGON germinates more evenly with a better stand.

ANNUALS

Flowers That Bloom the First Year From Seed

The best of success with many annuals may be had by sowing them in beds where they are to flower. The hardier varieties such as Calendula, Larkspur, Centaurea and Poppy may be sown very early, while the more tender, as Balsam, Nasturtium, Marigold and Zinnia, are best planted later when the ground has become warm. Prepare the soil carefully, making it soft and fine, and sow the seed broadcast or in rows. When large enough, thin the seedlings so that they stand about half as far apart as their maximum height. If a hotbed or coldframe is available many kinds may be started earlier and transplanted, hastening the blooming period. Perennials listed on page 38.

BIENNIALS AND PERENNIALS

Biennials bloom at their best, for one season only, from seed sown the previous year.

Perennials bloom for several years, ordinarily attaining satisfactory flowering size the second year. Most perennials are best sown in June so that the seedlings will be ready for transplanting after the heat of the summer is over.

A bed or coldframe where some protection from the sun can be given is best. Some kinds flower the first season and will be found listed as annuals.

FIELD AND ENSILAGE CORNS

U. S. No. 13

CORNELL 29-3

Ensilage Varieties

Later, leafier varieties producing heavy tonnage of ensilage per acre. Many will yield heavy crops of ears if planted early and spaced thinly for each stalk to develop. The hybrid varieties have strong root systems and usually outyield the open-pollinated kinds.

IDAHYBRID 544, 105 days. Yellow dent with uniformly large ears and strong leafy stalks. For late grain or ensilage.

IMPROVED LEAMING, 110 days. Standard ensilage and late grain corn. Many stalks produce two long ears.

SWEEPSTAKES, WESTBRANCH (Red), 110 days. Earliest true ensilage corn which produces mature ears in this climate.

YELLOW SWEEPSTAKES, 110 days. Immense leafy stalks usually ready for cutting a few days later than Westbranch. Ears are large and long with very broad yellow kernels.

U. S. No. 13, (Hybrid), 120 days. Outstanding for strong stalks and well braced root system enabling the corn to withstand heavy rain and wind. Reliable for grain as well as ensilage.

SUGAR ENSILAGE (Hybrid), 120 days. Giant hybrid between sweet corn and ensilage. Stalks are very large and leafy with sap of higher sugar content than other varieties.

HYBRID RED SWEEPSTAKES, 120 days. Similar to Westbranch, but more vigorous, very leafy and a little later.

HYBRID YELLOW SWEEPSTAKES, 120 days. Largest and leafiest of the hybrid ensilage varieties. In spite of its immense stalks it will produce enough grain to make a high feeding value.

Grain Varieties

CORNELL 35.5 HYBRID, 95 days. Very early yellow dent with narrow kernels, particularly valued where there is a short growing season.

IDAHYBRID 330, 95 days. Extra early yellow dent. Medium sized ears of close packed grain. Outstanding for uniformity, yield and earliness.

YELLOW CANADA, 100 days. Sometimes called 90-day yellow. The common 8-rowed flint corn of New England. Our strain produces particularly fine crops with large uniform ears.

CORNELL 29.3 HYBRID, 100 days. Vigorous heavy-leaved strain with a high yield of yellow dent ears tinged with red. Matures with Yellow Canada, but is leafier.

IMPROVED SMOKY DENT, 105 days. Reddish dent kernels with a white cap. Good producing hardy variety.

FERTILIZERS

COMPLETE GARDEN FERTILIZER 5-8-7 This is a complete fertilizer for general vegetable garden use. An application of 4 lbs. per 100 sq. ft., well raked in, is generally sufficient, although leafy crops will benefit by an additional application later in the season. When used in hills or drills the fertilizer should be well mixed with the soil so that seed does not come into direct contact with the fertilizer.

5 lbs. 50c; 10 lbs. 80c; 25 lbs. \$1.40;
50 lbs. \$2.20; 100 lbs. \$3.75

LAWN FERTILIZER 4-8-4 A complete fertilizer for lawns containing material that acts quickly to produce a thick green turf that helps to keep out weeds and crab grass. An application of 4 lbs. per 100 sq. ft. in early spring is effective on most lawns. If an extra feeding is given later care should be taken to wash the fertilizer thoroughly off the grass to prevent burning.

5 lbs. 55c; 10 lbs. 90c; 25 lbs. \$1.50;
50 lbs. \$2.30; 100 lbs. \$4.00

LUXURA A high grade all purpose fertilizer for lawns, flowers, shrubs and vegetables. This fertilizer is made of only the best materials compounded in a manner to release plant food as needed through the whole season. An application of 4 lbs. per 100 square feet is sufficient for the average soil.

1 lb. 25c; 5 lbs. 60c; 10 lbs. 95c;
25 lbs. \$1.90; 50 lbs. \$3.25; 100 lbs. \$5.50

SOLUBLE V H P F (Starter solution) A concentrated soluble food source with soluble hormones and other elements required to stimulate plant growth. Applied when plants are transplanted there is less wilting, earlier maturity and larger yield. Applied in liquid form to plants it requires only 1/10 the amount of ordinary fertilizers.

Lb. 65c; 3 lbs. \$1.20

BONE MEAL An excellent fertilizer for general use. Used as a top-dressing for lawns, the feeding rootlets assimilate bone meal slowly as it disintegrates over a long period, keeping the lawn in good condition all through the season. Because of its long-lasting qualities, bone meal is very desirable for fertilizing all hard wooded plants, including roses, flowering shrubs, fruit bushes, and trees. A liberal application mixed into the soil when planting bulbs or perennial plants will result in remarkable size and brilliancy of flowers. Use 25 to 50 lbs. per 1000 sq. ft.

SUPERPHOSPHATE Contains 20% Phosphoric Acid. Valuable for supplementing other fertilizers. Used to increase earliness, quality and firmness of growth of vegetables, fruit and flowers. Also an economical fertilizer for pastures and grass land.

Market price

HYDRATED LIME Very fine and more concentrated than Ground Limestone. Use $\frac{3}{4}$ the quantity for same results.

5 lbs. 25c; 10 lbs. 40c; 25 lbs. 65c;
50 lbs. \$1.00; 100 lbs. \$1.75

GROUND LIMESTONE Finely ground and effective as a neutralizer of soil acidity. It improves the texture of all soils, binding loose soils and opening heavy land. By stimulating bacterial action it liberates nitrogen and other plant food. Apply 100 lbs. per 1000 sq. ft. or 2 tons or more per acre.

100 lbs. \$1.00; 500 lbs. \$4.50

Fertilizer is not prepaid except locally, see inside front cover.

If gardening is your hobby, you will experience new delight provided you use Wizard to feed your plants. Every gardener knows that manure produces crisp, tender vegetables of unusual size and flavor. Vegetables must be grown quickly or else they become tough and tasteless. Wizard supplies the food that insures steady growth and early maturity. Packed in dustproof paper bags.

5 lbs. 45c; 10 lbs. 75c; 25 lbs. \$1.25; 50 lbs. \$2.15;

GRANULATED PEAT MOSS

The increasing use of Peat Moss for gardens shows a better understanding of its value. It is a vegetable product which remains in the soil for many years contributing to the formation of humus, making the soil more porous, and improving its general texture and condition. It contributes effective drainage and is a reservoir for storing moisture and air, thereby favoring plant growth. Also used for mulching perennial and rose beds, as well as around evergreens, retaining the moisture so necessary to their growth.
